

**Amendments to the Specification:**

Please replace the title with the following amended title:

PASSIVE MEDIA CONTENT ACCESS SYSTEM FOR LOGGING MEDIA EVENT  
INFORMATION AND RETRIEVING ADDITIONAL INFORMATION RELEVANT TO THE  
MEDIA EVENT INFORMATION

Please replace the paragraph beginning at page 11, line 22 and ending at page 12, line 7 with the following amended paragraph:

Turning now descriptively to the drawings, in which similar reference characters denote similar elements throughout the several views, FIGS. 1 through 12 illustrate an active media content access system 10, which comprises a remote control having an electronic system 100 that monitors the date, time, media type, and current channel that a user is currently watching. When the user depresses a selection button 110 during a television program they are interested in receiving additional information about, the electronic system ~~110~~ 100 immediately logs the date, time, media type, and current channel for later uploading to a control station 40. When the user is finished watching television, they then connect the electronic system 100 to the Internet 130 and upload the logged information to the control station 40, which matches the logged information with previously known programming information to allow for determination of the programming the user was watching when the selection button 110 was depressed. The control station 40 determines what available information to ~~the~~ send to the user, such as e-mail, websites, printed materials, software offers and other information related to the programming the user is interested in.
